SUTHAN K

FULL STACK DEVELOPER | SOFTWARE ENGINEER

Trivandrum, Kerala, India | +91 93843 40144 | suthanks2000@gmail.com
Portfolio: suthan.vercel.app | GitHub: github.com/suthanks2000 | LinkedIn: linkedin.com/in/suthan-k

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 2+ years of experience building scalable, client-facing web applications with React.js, Next.js, TypeScript, JavaScript, Node.js and Python. Cut API response time by 25% by optimising REST and GraphQL APIs. Hands-on with JWT/RBAC authentication, PostgreSQL indexing, Dockerised microservices on AWS and Azure, and CI/CD delivery in cross-functional Agile teams.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, Python, SQL
- **Frontend:** React.js, Next.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS
- **Backend & APIs:** Node.js, Express.js, FastAPI, Flask, REST APIs, GraphQL, WebSockets (SignalR), Microservices
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, TimescaleDB, Prisma, TypeORM
- **Cloud & DevOps:** AWS (Lambda, ECS, API Gateway, S3, RDS, SQS, CloudWatch, IAM), Azure (Container Apps, DevOps), Docker, Nginx, GitHub Actions, CI/CD, Cloudflare, Vercel
- **Security & Testing:** JWT, RBAC, OAuth2, Keycloak, Jest, Vitest, PyTest
- **Tools & Practices:** Git, Jira, Agile/Scrum, Data Structures & Algorithms

PROFESSIONAL EXPERIENCE

Software Engineer | Magpii Innovations | **Nov 2025 – Present**

- Develop full-stack features for an Industrial IoT and Digital Twin platform (React 19, TypeScript, ASP.NET Core) and an AI-powered education management platform (Next.js, Node.js, PostgreSQL), delivered in Agile sprints.
- Build event-driven .NET microservices with SignalR WebSockets for real-time telemetry, handling 10,000+ concurrent events/sec at sub-100 ms latency.
- Deliver REST APIs with pagination, search, filtering and RBAC across 12+ modules of a live education platform used by schools, colleges and universities.
- Onboard clients by translating requirements into platform configuration and features, and resolve production issues on live platforms.

Junior Software Developer | Comorins Technologies | **Mar 2025 – Oct 2025**

- Cut manual viewing coordination and booking conflicts by building client self-booking with optimised scheduling logic (React.js, Next.js, Node.js, Express.js).
- Improved SEO and page-load performance for an AI-powered real estate platform with server-side-rendered Next.js and TypeScript pages.
- Improved client engagement and retention with AI-powered follow-up automation in Python, plus analytics dashboards for client preferences and viewing performance.
- Secured Node.js REST APIs with JWT authentication and RBAC (MySQL/PostgreSQL), and shipped releases to Vercel through GitHub Actions CI/CD.

Junior Software Developer | Devaxcel Tech Pvt. Ltd. | **Sep 2024 – Mar 2025**

- Cut API response time by 25% by optimising GraphQL and REST APIs, and built React, TypeScript and Redux Toolkit features for a live HealthTech platform.
- Managed PostgreSQL migrations, indexing and secure queries with TypeORM to keep data access fast and safe.
- Built and maintained order-related Node.js and TypeScript microservices within a 28-service backend, so each service could be deployed and scaled independently.
- Automated releases to AWS Lambda through GitHub Actions CI/CD pipelines.

KEY PROJECTS

Enterprise Industrial IoT & Digital Twin Platform

Technologies: React 19, TypeScript, .NET 8/9, ASP.NET Core, SignalR, PostgreSQL, Apache AGE, TimescaleDB, Docker, Azure Container Apps, Keycloak

- Built an event-driven digital twin of 7+ ASP.NET Core microservices with a React 19 operator cockpit, enabling real-time monitoring of assets across industrial plants.
- Cut multi-hop graph queries by 45% and sped up time-series aggregations 3x by combining Apache AGE (asset graph) and TimescaleDB (sensor telemetry) in one PostgreSQL data tier.
- Cut client deployment time from 3 weeks to 2 days with a metadata-driven UI configured through JSON schemas; secured with Keycloak (OIDC/OAuth2, RBAC) and tested with xUnit and Vitest (85%+ coverage).

AI-Powered Education Management Platform

Technologies: React, Next.js, TypeScript, Node.js, Express.js, PostgreSQL, Prisma, Redis, Docker, AWS ECS

- Delivered features across 12+ modules (students, staff, library, timetable, attendance, assignments, quizzes, parent portal) supporting academic and administrative workflows for schools, colleges and universities.
- Resolved API and data compatibility issues by migrating database access from Prisma/MySQL to raw PostgreSQL queries, and extended AI-powered assignment and quiz workflows (subject mapping, publishing, filtering).

HealthTech App – Digital Healthcare Platform

Technologies: React, TypeScript, Node.js, TypeORM, PostgreSQL, GraphQL, REST APIs, AWS (Lambda, API Gateway, S3, RDS, SQS, CloudWatch)

- Processed 10,000+ daily orders for medicine purchases and digital prescriptions on a live platform, with multi-stage order verification.
- Automated order processing and delivery-readiness workflows with AWS Lambda, and secured patient health records with JWT authentication and RBAC across microservices.

EDUCATION

Bachelor of Engineering (B.E.)

University College of Engineering, Nagercoil | 2019 – 2022
